

## Intranets

### *Improve workforce productivity*

Intranets are a mystery to most of us. But they are basically so easy. An intranet is no more than your companies internet where internal information is published instead of content which is intended for public viewing.

An intranet will most likely help your employees to have equal access to all relevant information they might need, communicate (horizontal and vertical communication) and all the information published is interactive. This means, that every user who has adequate rights to publish can upload content, which is then viewable to every employee. And all of that without costs for extra hard- or software which needs to be distributed to your team(s) because the integrated webbrowser supports full access to the intranet.

One more benefit is the fact, that you can offer the content on a push-basis as well. This means, that content updates can be made accessible to employees with the help of RSS and XML. When a page is updated, which your employee has signed up to prior, he will be informed about updates the instance they are published.

Upon demand, we show you how to convert your intranet into an extranet. Which means, that your team members can access the intranet from everywhere in the world, if the have proper authentication!

Inter- and Extranets are useful in

- Businesses with more than 5 employees
- Workforce teams who rely on highest level information distribution / sharing and organization-wide exchange of knowledge
- Companies with field-force sales-personell

and deliver the following benefits

- Enabeling vertical and horizontal communication
- Cost-reduction because paper notes are history
- Reducing network traffic because information is not distributed via email
- No costs for secondary software because the web-browser installed with every operating system will grant access to the intranet
- Using XML/RSS technology you can inform your intranet-users about news the second they are published
- Limit access by employee access-level

Talk to about interanets. We will help you to gain insight.
